

Grundfos & FF-Automation Join Forces

Oy Grundfos Pumput Ab (Finland) and FF-Automation have made co-operation agreement, which combines leading knowledge of Pumps and Automation. According to the cooperation agreement in Finland, Grundfos' pumps will be controlled using AutoLog GSM-PLCs; Grundfos' pumps will be monitored using FF-Automation's AutoLog ControlMan

AutoLog ControlMan gives the easiest way to monitor and control remote assets

Cloud SCADA Service. The two companies have long history of co-operation: FF-Automation has supplied AutoLog pump controllers and remote monitoring solution to over 5000 Grundfos' pumps. Grundfos offers efficient pump solutions for all purposes. With over 16,000 employees and annual production of more than 16 million pump units a year, Grundfos is one of the world's well-known pump manufacturers. AutoLog ControlMan gives the easiest way to monitor and control remote assets. It brings measurements from field devices to web browser. Control room application can be opened with normal web browser - without any software installations. User(s) just login to the service web pages to monitor and control their widely located remote assets. Same real-time field information can be shared with hundreds of colleagues around the world through Internet or within the company's LAN/WAN network. AutoLog ControlMan can be used in any remote monitoring application, pumps, street lights, cathodic protection, environmental, etc. AutoLog® ControlMan™ is a complete remote monitoring and controlling solution that includes AutoLog® GSM-PLC devices, wired or wireless sensors and Internet cloud SCADA service. AutoLog ControlMan is available from a standard Web browser, anywhere, anytime. ■
