Remote supervision of Gas pipeline's Cathodic Protection

FF-Automation offers complete solutions for remote supervision and control for target applications. Target applications can be monitored and controlled from local control room or remotely from any PC within LAN (Local Area Network) or Internet using web browser. Web Studio has efficient tools to realize multi level security system using data encryption, user rights and firewall. Alarms and reports can be forwarded to service men's GSM phones and e-mails.

The world's biggest oil producer company uses FF-Automation's AutoLog[®] RTUs and Web Studio SCADA in its nation wide oil- and gas pipeline supervision. FF-Automation designed, manufactured, commissioned and trained customer to use and maintain the remote supervision system, which fulfills very demanding specifications for communication and harsh environmental conditions. AutoLog[®] 10SP RTU is based on tested and reliable AutoLog technology, operating in hundreds of similar applications.
